

PH-6H

CIRCULATING WATER BATH

Introduction

Circulating Water Bath is used for distillation, drying, concentration and impregnation of chemicals. Its temperature can be precisely controlled using a digital display, ensuring accurate and reliable temperature regulation. Additionally, the baths come in various sizes and configurations, depending on the specific application and requirements.

Features

- This product is a sink type, with a maximum diameter of 12 cm. Each hole has four circles and one cover. The inner pot is made of a whole piece of stainless steel stamping (or stainless steel plate welding).
- The shell is made of high-quality thin steel plate and sprayed with plastic.
- The electric heating tube is installed in the middle of the water, which can heat up quickly and consume less power.
- It is equipped with a digital display constant temperature device (intelligent temperature controller), which can be operated according to the instructions of the temperature controller: the temperature adjustment range is 0-100°C, $\pm 0.5^\circ\text{C}$, and the water temperature can be adjusted according to the user's needs.

Technical Parameter

Number of holes	6
Dimensions	530*400*200mm
Working size	470*300*100mm
Power	1200W
